

Tutorial 13: **Financial Analysis (Interpretation of Accounts)****Question 1**

You are to study the following financial statements for two departmental stores and then answer the questions which follow:

| | Juzzco | | Izeetan | |
|------------------------------------|----------------|---------------|----------------|----------------|
| | RM | RM | RM | RM |
| Statement of Profit or Loss | | | | |
| Sales | | 680,000 | | 925,000 |
| Less: <u>Cost of goods sold:</u> | | | | |
| Opening inventories | 150,000 | | 80,000 | |
| Purchases | 300,000 | | 420,000 | |
| | <u>450,000</u> | | <u>500,000</u> | |
| Less: Closing inventories | (115,000) | (335,000) | (95,000) | (405,000) |
| Gross profit | | 345,000 | | 520,000 |
| Less: <u>Expenses:</u> | | | | |
| Depreciation | 5,000 | | 20,000 | |
| Wages & salaries | 190,000 | | 300,000 | |
| Other expenses | 65,000 | (260,000) | 50,000 | (370,000) |
| Net profit | | <u>85,000</u> | | <u>150,000</u> |

Stat. of Financial PositionNon-current assets

| | | | | |
|-----------|--|--------|--|--------|
| Equipment | | 18,000 | | 20,000 |
|-----------|--|--------|--|--------|

Current assets

| | | | | |
|----------------------------------|----------------|----------------|----------------|----------------|
| Inventories | 115,000 | | 95,000 | |
| Trade receivables | 135,000 | | 150,000 | |
| Bank | 25,000 | | 12,500 | |
| | <u>275,000</u> | | <u>257,500</u> | |
| Less: <u>Current liabilities</u> | | | | |
| Trade payables | (173,000) | 102,000 | (101,000) | 156,500 |
| | | <u>120,000</u> | | <u>176,500</u> |

Financed by:

| | | | | |
|-----------------|--|--------|--|--------|
| Opening capital | | 90,000 | | 80,000 |
|-----------------|--|--------|--|--------|

| | | |
|-----------------|----------------|----------------|
| Add: Net profit | 85,000 | 150,000 |
| | <u>175,000</u> | <u>230,000</u> |
| Less: Drawings | (55,000) | (53,500) |
| | <u>120,000</u> | <u>176,500</u> |

Required:

(a) Calculate the following ratios for each business:

(i) Gross profit as a percentage of sales;

A higher ratio shows a better financial performance.

| Juzzco | Izeetan |
|--|---|
| $\frac{345000}{680000} \times 100\%$ = 51% For every RM 1 of sales, Juzzco makes RM 0.51 in gross profit, RM 0.49 is COGS. | $\frac{520000}{925000} \times 100\%$ = 56% For every RM 1 of sales, Izeetan makes RM 0.56 in gross profit, RM 0.44 is COGS. |

(ii) Net profit as a percentage of sales;

A higher ratio shows a better financial performance.

| Juzzco | Izeetan |
|---|--|
| $\frac{85000}{680000} \times 100\%$ = 13% For every RM 1 of sales, RM 0.13 is the remainder profit. | $\frac{150000}{925000} \times 100\%$ = 16% For every RM 1 of sales, RM 0.16 is the remainder profit. |

(iii) Current ratio;

A ratio greater than 1 means short-term assets are more than enough to meet short-term liabilities

| Juzzco | Izeetan |
|---|---|
| $\frac{275000}{173000}$ $= 1.6:1 \text{ (1.6 times)}$ | $\frac{257500}{101000}$ $= 2.5:1 \text{ (2.5 times)}$ |

(iv) Quick ratio;

A ratio greater than 1 means short-term assets are more than enough to meet short-term liabilities (just that closing inventories is excluded as it is considered illiquid)

| Juzzco | Izeetan |
|--|---|
| $\frac{275000 - 115000}{173000}$ $= 0.9:1 \text{ (0.9 times)}$ | $\frac{257500 - 95000}{101000}$ $= 1.6:1 \text{ (1.6 times)}$ |

(v) Inventories turnover *days*;

A lower ratio shows that the inventories are moving fast (the product sells faster). Smaller is better.

$\frac{\text{Average Inventories} \times 365 \text{ days}}{\text{Cost of Good Solds}}$

| Juzzco | Izeetan |
|---|---|
| $\frac{\text{Average Inventories}}{2}$ $\frac{150000 + 115000}{2}$ $= 132500$ $\frac{132500 \times 365}{\text{Cost of Good Solds}}$ | $\frac{\text{Average Inventories}}{2}$ $\frac{80000 + 95000}{2}$ $= 87500$ $\frac{87500 \times 365}{\text{Cost of Good Solds}}$ |

| | |
|--|----------------------------------|
| $\frac{335000}{405000}$ $= 144 \text{ days}$ | $\frac{405000}{79 \text{ days}}$ |
|--|----------------------------------|

(vi) Trade receivables turnover days;

Average period taken by trade receivables to pay up. Smaller is better.

$\frac{\text{trade receivables} \times 365 \text{ days}}{\text{sales}}$

| Juzzco | Izeetan |
|--|--|
| $\frac{135000 \times 365}{680000}$ $= 72 \text{ days}$ | $\frac{150000 \times 365}{925000}$ $= 59 \text{ days}$ |

(vii) Trade payables turnover days.

Average period taken to pay trade payables. Higher ratio might indicate that the business has a problem paying its supplier.

$\frac{\text{trade payables} \times 365 \text{ days}}{\text{purchase}}$

| Juzzco | Izeetan |
|---|--|
| $\frac{173000 \times 365}{300000}$ $= 210 \text{ days}$ | $\frac{101000 \times 365}{420000}$ $= 88 \text{ days}$ |

(b) Drawing upon all your knowledge of accounting, comment upon the differences and similarities of the accounting ratios for Juzzco and Izeetan.

Which business seems to be the most efficient? Give possible reasons.

Izeetan seems to be the most efficient in terms of both the profitability ratios which are gross profit margin and net profit margin. Izeetan is also more liquid due to its higher current ratio and acid test ratio of 2.5 times and 1.6 times respectively.

Izeetan seems to be more efficient, possibly due to:

(i) Izeetan products are sold at a slightly more profitable price compared to Juzzco. Higher gross profit margin of 56% means higher selling price and/or lower cost of goods sold

(ii) Higher net profit margin of 16% achieved means proportionately less expenses incurred in operating the business

(iii) Faster turnover of inventories means proportionately large amount of inventories are being purchased to generate sales, hence less amount of inventories lying idle;

(iv) Juzzco's quick ratio is less than 1, therefore, liquid current assets are not adequate to cover current liabilities. However, the situation is still not too serious yet because the ratio is 0.9 times;

(v) Faster collection of debts from trade receivables, hence, faster turnaround of cash to generate more sales for the business.

(vi) Faster payment to trade payables means ability to purchase at cheaper prices or enjoy more trade discounts from suppliers.

(vii) However, Juzzco is taking a long time (210 days) to pay its trade payables in order to keep the money for its business operations. If suppliers demand for earlier payment, Juzzco will probably face liquidity problem because its liquid current assets will not be sufficient to pay its trade payables.

Question 2

Statement of profit or loss of Hill Enterprise for the year ended 31 August:

| | 2018 | 2019 | 2020 |
|--------------------------|--------|--------|--------|
| | RM'000 | RM'000 | RM'000 |
| Sales | 244 | 362 | 542 |
| Less: Cost of goods sold | (162) | (272) | (434) |
| Gross profit | 82 | 90 | 108 |
| Less: Expenses | (55) | (76) | (96) |
| Net profit | 27 | 14 | 12 |

Statement of financial position for Hill Enterprise as at 31 August:

| | 2018 | | 2019 | | 2020 | |
|-----------------------------|------------|---------|------------|---------|------------|---------|
| | RM '000 | RM '000 | RM '000 | RM '000 | RM '000 | RM '000 |
| Non-current assets | | 62 | | 122 | | 162 |
| <u>Current assets</u> | | | | | | |
| Inventories as at 31 August | 50 | | 52 | | 82 | |
| Trade Receivables | 54 | | 82 | | 112 | |
| Bank balance | 46 | | 22 | | - | |
| | <u>150</u> | | <u>156</u> | | <u>194</u> | |
| | <u>212</u> | | <u>278</u> | | <u>356</u> | |

(Continued)

| | 2018 | | 2019 | | 2020 | |
|----------------------------|------|------|------|------|------|------|
| | RM | RM | RM | RM | RM | RM |
| | '000 | '000 | '000 | '000 | '000 | '000 |
| <u>Equity</u> | | | | | | |
| Share capital | 102 | | 126 | | 152 | |
| Reserves | 68 | | 80 | | 90 | |
| | | 170 | | 206 | | 242 |
| <u>Current liabilities</u> | | | | | | |
| Trade payables | 42 | | 72 | | 92 | |
| Bank overdraft | - | | - | | 22 | |
| | | 42 | | 72 | | 114 |
| | | 212 | | 278 | | 356 |

Inventories as at 31 August 2017 amounted to RM42,000.

Required:

(a) Calculate the following ratios for years 2019 and 2020 (2018 is given):

(i) Gross profit margin (2018: 34%);

| 2019 | 2020 |
|--|---------------------------------------|
| $\frac{90000}{362000} \times 100\%$ $= 25\%$ | $\frac{108}{542} \times 100$ $= 20\%$ |

(ii) Net profit margin (2018: 11%);

| 2019 | 2020 |
|---------------------------------------|-------------------------------------|
| $\frac{14}{362} \times 100\%$ $= 4\%$ | $\frac{12}{542} \times 100$ $= 2\%$ |

(iii) Current ratio (2018: 3.6:1);

| 2019 | 2020 |
|--|---|
| $\frac{156}{72}$ $= 2.2:1 \text{ (2.2 times)}$ | $\frac{194}{114}$ $= 1.7:1 \text{ (1.7 times)}$ |

(iv) Quick ratio (2018: 2.4:1);

| 2019 | 2020 |
|---|--|
| $\frac{156 - 52}{72}$ $= 1.4:1 \text{ (1.4 times)}$ | $\frac{194 - 82}{114}$ $= 1:1 \text{ (1 times)}$ |

(v) Inventory turnover days (2018: 104 days);

| 2019 | 2020 |
|--|--|
| $\frac{\text{Average Inventories}}{2}$ $\frac{50000 + 52000}{2} = 51000$ | $\frac{\text{Average Inventories}}{2}$ $\frac{82000 + 52000}{2} = 67000$ |

| | |
|---|---|
| $\frac{51 \times 365}{272}$ $= 68 \text{ days}$ | $\frac{67 \times 365}{434}$ $= 56 \text{ days}$ |
|---|---|

(vi) Trade receivable days (2018: 81 days);

| 2019 | 2020 |
|---|--|
| $\frac{82 \times 365}{362}$ $= 83 \text{ days}$ | $\frac{112 \times 365}{542}$ $= 75 \text{ days}$ |

(vii) Trade payable days (2018: 90 days).

Cost of Goods Sold (COGS) = Opening Inventory + Purchases - Closing Inventory

| 2019 | 2020 |
|---|---|
| $\text{Purchase} = \text{COGS} - \text{OI} + \text{CI}$ $= 272 - 50 + 52$ $= 274$ $\frac{72 \times 365}{274}$ $= 96 \text{ days}$ | $\text{Purchase} = \text{COGS} - \text{OI} + \text{CI}$ $= 434 - 52 + 82$ $= 464$ $\frac{92 \times 365}{464}$ $= 72 \text{ days}$ |

(b) Based on the ratios given/calculated for 2018, 2019 and 2020, comment on the trends you see in each of the following categories of ratios:

(i) Profitability;

Gross Profit Margin

There is a decrease in gross profit margin from 2018 to 2020. This might be due to the growing COGS from 2018 to 2020. Higher cost of goods sold will lead to lower gross profit margin.

Net Profit Margin

2018 - 2019 = decrease by 7%

2019 - 2020 = decrease by 2%

It is due to the increasing expense from 2018 to 2020 which results in a lower ratio of net profit margin.

(ii) Liquidity;

Current ratio and Quick ratio

Decreasing in current ratio and quick ratio from 2018 to 2020. It might be due to the increase in current liabilities from 2018 to 2020.

However, all the current ratio and quick ratio calculated are still able to meet short-term assets to meet short term liabilities (ratio greater than 1) even though they are decreasing year by year.

(iii) Efficiency.

Inventory turnover days

Inventory turnover ratio is growing faster from 2018 to 2020. This is probably due to better sales management after the new acquisition of non-current assets.

Trade receivables days

Trade receivables turnover improved year to year. It might be due to better collection of debts.

Trade payables days

Trade payables days have been increased by 6 days from 2018 to 2019 due to the company wanting to have extra cash on hand that could be used for short-term investment.

Trade payables days have been shortened by 24 days, probably want to enjoy better trade discounts for early payment to suppliers.

Section B: For students' own practice**Question 1**

The summarised accounts of Bright Star Sdn Bhd for the years 2020 and 2021 are given below:

Statement of Comprehensive Income for the years ended 31 December...

| | 2020 | | 2021 | |
|-------------------------------|----------|--------------|----------|--------------|
| | RM'000 | RM'000 | RM'000 | RM'000 |
| Sales | | 198 | | 282 |
| Less: Cost of goods sold | | <u>(150)</u> | | <u>(207)</u> |
| Gross profit | | 48 | | 75 |
| Less: <u>Expenses</u> : | | | | |
| Administration expenses | 37 | | 46 | |
| Debenture interest | <u>-</u> | <u>(37)</u> | <u>5</u> | <u>(51)</u> |
| Net profit before tax | | 11 | | 24 |
| Less: Tax expense | | <u>(3)</u> | | <u>(4)</u> |
| Net profit after tax | | 8 | | 20 |
| Less: <u>Appropriation</u> | | | | |
| 5% ordinary dividend | | <u>(5)</u> | | <u>(5)</u> |
| Retained profits for the year | | 3 | | 15 |
| Retained profits b/d | | <u>25</u> | | <u>28</u> |
| Retained profits c/d | | <u>28</u> | | <u>43</u> |

Statements of Financial Position as at 31 December...

| | 2020 | | 2021 | |
|--------------------------|-------------|------------|-------------|------------|
| | RM'000 | RM'000 | RM'000 | RM'000 |
| Non-current assets (NBV) | | 110 | | 140 |
| Inventories | 20 | | 30 | |
| Trade receivables | 25 | | 28 | |
| Bank | <u>-</u> | | <u>7</u> | |
| | 45 | | 65 | |
| Trade payables | <u>(15)</u> | | <u>(12)</u> | |
| Bank | <u>(12)</u> | 18 | - | 53 |
| | | <u>128</u> | | <u>193</u> |
| Ordinary share capital | | 100 | | 100 |
| Retained profits | | <u>28</u> | | <u>43</u> |
| | | 128 | | 143 |
| 8% Debentures | | <u>-</u> | | <u>50</u> |
| | | <u>128</u> | | <u>193</u> |

Inventories as at 1 January 2020 was RM50,000 ([opening inventories](#)).

Required:

- (a) Calculate the following ratios for 2020 and 2021:
- (i) Gross profit as a percentage of sales;

| 2020 | 2021 |
|---|---|
| $\frac{48}{198} \times 100\%$ $= 24\%$ | $\frac{75}{282} \times 100$ $= 27\%$ |

(ii) Net profit as a percentage of sales;

| 2020 | 2021 |
|---|--|
| $\frac{11}{198} \times 100\%$ = 5.6% | $\frac{24}{282} \times 100$ = 8.51% |

(iii) Inventories turnover times;

| 2020 | 2021 |
|---|---|
| Average Inventories $\frac{50000 + 20000}{2} = 35000$ $\frac{150}{35}$ = 4.3 times | Average Inventories $\frac{20000 + 30000}{2} = 25000$ $\frac{207}{25}$ = 8.3 times |

(iv) Trade receivables turnover days;

| 2020 | 2021 |
|--|--|
| $\frac{25}{198} \times 365$ = 46 days | $\frac{28}{282} \times 365$ = 36 days |

(v) Trade payables turnover days;

| 2020 | 2021 |
|---|---|
| $150 = \text{purchase} + 50 - 20$ purchase = 120 $\frac{15}{120} \times 365$ = 46 days | $207 = \text{purchase} + 20 - 30$ purchase = 217 $\frac{12}{217} \times 365$ = 20 days |

(vi) Current ratio;

| 2020 | 2021 |
|--------------------------------|--------------------------------|
| $\frac{45}{27}$ = 1.7 times | $\frac{65}{12}$ = 5.4 times |

(vii) Quick ratio.

| 2020 | 2021 |
|--------------------------------------|--------------------------------------|
| $\frac{45 - 20}{27}$ = 0.93 times | $\frac{65 - 30}{12}$ = 2.92 times |

(b) State the possible reasons for and significance of any changes in the ratios shown by your calculations.

(i) There is a slight increase in the gross profit margin possible due to increase in selling prices or sales volume;

(ii) Net profit as a percentage of sales has increased by 3%, probably due to some savings in expenses.

(iii) Inventories turnover almost doubled, as a result of lower inventories. This is probably due to better sales management after the new acquisition of non-current assets (that was financed by debentures)

(iv) Trade receivables turnover improved by about 10 days due to better collection of debts;

(v) Trade payables turnover shortened by 26 days, probably to enjoy better trade discounts for early payment to suppliers, since the company has surplus money in the bank account (in the previous year, the bank account was in overdraft);

(vi) Current ratio has improved by about 3 times due to better liquidity after issuing the debentures (a type of long-term business debt not secured by any collateral);

(vii) Acid test ratio has improved as well due to the same reason in (vi) above.
